(54) Title: DISPLAY PANEL AND DISPLAYING APPARATUS HAVING THE PANEL

(57) Abstract: A display panel includes first and second display sub-panels superimposed on each other. Each pixel of the display panel is constituted by a first sub-pixel of the first display sub-panel and a second sub-pixel of the second display sub-panel. The first and second display sub-panels are superimposed on each other so that the first and second sub-pixels constituting each pixel of the display panel are displaced at a distance in relation to each other in a surface direction of the display sub-panel. This can restrain moire patterns from being produced when the display panel is used with a flat optical element having periodical structures, such as touch panel or light conducting plate.
